

# Spares Inc.

Due to previous experience with Web Steel Buildings, the owner chose to work with the manufacturer again on this new 6,720 sq. ft. tennis club in Florence, OR. A 60' x 112' x 18' open-web Vaulted Clearspan Truss building system was designed with 14' bay spacing. The project also features 26-gauge, 16" Skyline panels with an Everglade finish from ASC Building Products.

Owner Frank Litkei served as the general contractor and erector. Web Steel Buildings, Sandy, OR, designed the project, which was started in July 2004 and finished in September of the same year.
